

REFERENCE LETTER

To Whom it may concern,

We hereby confirm that Tundra Advisory Sp. z o.o. (Tundra) was leading the negotiations and realization of 41,4 MW – Kobylnica Wind Farm project on the side of Investor – Eko Energy Sp. z o.o. during years of 2010/2011.

The scope of delivery and services offered by Siemens included

- Supply, transportation, erection and commissioning of 18 turbines Siemens SWT 2,3 with rotor diameter of 101 m.
- Long term Service and Availability Agreement for the turbines delivered.

It was the first time when wind turbine of such rotor diameter was installed in Poland by Siemens Group and we are convinced that was the best match for site prevailing wind conditions. The total value of Supply agreement exceeded EUR 42.000.000.

Tundra representatives were very demanding, while representing the Investor during the negotiations and project execution, however always looking at the overall benefit of the Project. Tundra team presented very high level of professional knowledge and experience, which always helped to find compromise satisfactory to both Parties.

Close cooperation during project execution was inevitable for the project to be delivered without cost overruns and within the planned schedule.

In fact, it is remarkable that project of this size was conducted without major disruptions and all Investor's obligations were fulfilled as foreseen in the Agreement, thanks to coordination effort of Tundra team and its subcontractors.

We are sure that this project allowed both Parties to gain valuable experience and remarkable know-how and hope to continue business where Tundra would be playing such a significant role in any future project.

We are also in position to recommend Tundra and its team to any Investor looking for a professional team to represent his wind business in Poland.

Kind regards

Siemens Sp. z o.o.
